

Liquid Crystal Display Panel

ABSTRACT OF THE INVENTION

5 Contact holes between drains and pixel electrodes, and between
common lines and counter electrodes are located on the same side of
the pixel region. The pixel electrodes and the counter electrodes are
made of a transparent conductive material, thereby increasing a
transmittance and an aperture ratio. Furthermore, the pixel
10 electrodes and the counter electrodes are inter-digital electrodes and
interlaced with each other so as to attain a wide viewing angle effect.
